work with a model directly from another file format. This can also be used to publish files from AutoCAD directly to other CAD and design software. 3D On-Screen Rendering Capabilities New rendering capabilities in AutoCAD enable you to view and render 3D objects on your screen. To render 3D objects in AutoCAD, you use the Visible Range (VR) tool. This tool allows you to select any 3D surface to view, rotate, and move to preview and render the surface in three dimensions. Note : Only the configuration files of the package is saved, in the Autodesk folder. The other files, such as \*.exe and \*.dll are not saved. Note : The key generator is NOT able to detect the generated key file on PC. You will be asked to choose a directory where the key files will be saved. If the key files exist on the user machine, or on the user's mapped network drive, the key generator will save the key in the place where the CAD application is installed. This can have serious consequences if you use this feature. You must take this into consideration before generating your key. The generated key can be stored on the CD. It can also be stored on the hard disk if you prefer. See also Cross platform file format References Category:Archive formats Category:Autodesk Category:Digital container formats

Insurrection Day on the Planet of the Apes. More to come but here are some pictures taken during the day. The center of Wicomico County was a hive of activity. The sheriff's department and the local emergency services began setting up "Emergency Responders" stations near the campus of the University of Maryland. The county authorities were to treat the insurrection as if it were a natural disaster, with long lines of traffic of family members trying to get to their injured or missing relatives at the University Medical Center, UMCP, Hospital, all under one roof. While I was there, I didn't see any of the injured or missing. The Pentagon evacuated Defense Department employees and ordered them to stay off all military bases. Navy sailors were told to report to duty but were not allowed to go to their duty posts. Navy sailors were told to stay off home while Navy dependents were permitted to leave the bases. The first reports of the insurrection came from Baltimore County where hundreds of demonstrators took over a Baltimore County fire station that was on the way to the University of Maryland campus. Several people were injured in the rioting. Meanwhile, at UMCP, the news broke that Prince George, the son of Charles and Diana had been airlifted to the hospital. This happened at the same time that the University was announcing that Charles was in the hospital and that he would be available to the media at the University in the next few hours. On the mainland, the Pentagon was evacuated and two thousand workers were sent home for the weekend.
