Extending the functionality of AutoCAD Product Key Extending AutoCAD is the process of building an application which is capable of adding additional functionality beyond the AutoCAD core functionality provided by the product. AutoCAD includes

a set of API's to support Autodesk Exchange Applications, Graphic, Plotter and AEC integration, and AutoCAD-based applications (Autodesk Exchange Apps). The AutoCAD API allows 3rd party applications to integrate into AutoCAD's command structure. The API includes an Application Programming Interface (API) which is used by AutoCAD and the applications to share information between them. The data which can be shared includes the drawing information, RSL information, and AutoCAD history. This allows 3rd party applications to use drawing and other information within AutoCAD.

Customization applications There are several customizing applications in AutoCAD, which modify or enhance its functionality. AutoCAD Map 3D 2010 is a plugin for AutoCAD 2009 which adds functionality to create 3D maps, which are compatible with Google Earth. A feature of AutoCAD Map 3D 2010 is the ability to export a map to ArcIMS or Bing Maps. AutoCAD Architectural is a plugin for AutoCAD which allows users to create architectural designs. AutoCAD Mechanical is a plugin for AutoCAD which allows users to create mechanical designs. AutoCAD Electrical is a plugin for AutoCAD which allows users to create electrical designs. AutoCAD Civil 3D is a plugin for AutoCAD which allows users to create civil engineering designs. AutoCAD Layout is a plugin for AutoCAD which allows users to generate printable document layouts. AutoCAD LT is a plugin for AutoCAD which allows users to create printable document layouts. AutoCAD Architect is a plugin for AutoCAD which allows users to create architectural designs. AutoCAD Plotter is a plugin for AutoCAD which allows users to draw plots (plots are used to graphically show values of data). AutoCAD Mechanical is a plugin for AutoCAD which allows users to create mechanical designs. AutoCAD 3D Graphic is a plugin for AutoCAD which allows users to create 3D models. AutoCAD Landmark is a plugin for AutoCAD which allows users to create and place AutoCAD objects as landmarks. a1d647c40b

Q: Sorting a list in python, keeping an index value I have a list that is the result of a kmeans algorithm on a numeric input. The list has the format {'x':[0,2,1,1,3], 'y':[1,3,3,3,3]} and so on. I want to sort by the x value. However, the x value is the index of the list item and I need to keep this value. The result I need is something like: {'x':[0,3,1,2,1], 'y':[1,2,3,3,3]} Any help is appreciated

A: This should do it: In [11]: lst Out[11]: [{'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}] In [12]: sorted(lst, key=lambda x: x['x']) Out[12]: [{'x': [0, 3, 1, 2, 1], 'y': [1, 2, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}, {'x': [0, 2, 1, 1, 3], 'y': [1, 3, 3, 3, 3]}]
