In an age of empire's and corruption, the people are raised up against the power of the Shogunate. With the only remaining power for the people comes the civil wars and conflicts known as "The Revolution". The Shogunate has set their eyes on the resistance and sees it for what it is: rebels and a thorn in their side. They send a man to do their bidding and strengthen the Shogunate army and all that's left of the civil war resistance is to fill their ranks with the disenfranchised. The Shogunate sends out Captain Usado to take control of the revolting areas. Led by the rules of the Shogunate, as in any other lands, the inhabitants are forced to work for the sake of the war effort, in order to prepare for the upcoming campaign. Set in another era, where samurai's are a thing of the past, the government forces use mechanized units and heavy weaponry, while the insurgents recruit young men from the more rural areas, for their guerrilla warfare. The early battles are fought in the ruins of the war's past, as the insurgents attempt to hold back the Shogunate's advance. But as the ranks of the insurgents grow, and the balance of power is tipped in their favour, they take to the mountains to regroup and raise a new army. Playing as the insurgents, you must join the resistance to build your forces and stand up against an enemy who has not lost sight of his goal of conquest. Q: How do you show that every cyclic abelian group is a finite direct sum of cyclic groups. I am currently working on proving that a cyclic group is a direct sum of a bunch of \mathbb{Z}_{p^n} 's. My solution begins with: $\mathbb{Z}_{p^n} = (1) \oplus (p) \oplus (p^2) \oplus (p^3) \oplus \dots$ I am then trying to show that (p^i) is a cyclic group with i generating elements that we will denote $p^i = (i_1, i_2, i_3, \dots, i_k)$ where $k = \frac{p^i - 1}{p - 1}$. Now, I am having some issues showing that k is an integer. A question I was posing myself yesterday was: "If j is a positive integer, why is $\frac{p^j - 1}{p - 1}$ an integer?" I tried plugging in various primes that I know to be factors of $p^j - 1$ and got the equation $p \mid \frac{p^j - 1}{p - 1}$, which just isn't making a whole lot of sense to me, especially when my textbook stated that the factor ring of \mathbb{Z}_{p^j} is isomorphic to $\mathbb{Z}_{p^{j-1}}$. Am I missing something super fundamental? If so, how do you show that $\frac{p^j - 1}{p - 1}$ is an integer. If not, can anyone clarify? Many thanks A: The number $\frac{p^j - 1}{p - 1}$ is certainly an integer, but your textbook must mean that the ring

The basic goal of the game is to pick up some food—chase down the target, and then eat. If it cannot catch the food, then the formula will return to the beginning state. The target will have different colors (relative position) and different speeds for different food types. The labyrinth is divided into several levels, every level comes with its own size, speed, and food type. In order to avoid fall into the bottom, the game will keep the 'window of safety', which is a kind of protection for the player. What's new:

turns 3 Mattia Perugini walked over to his corner desk to see his 6th grade photo from elementary school tacked up along the wall. His eyes scanned down from the face of one kid who was quickly growing into a young man, to another, and a third, and a fourth. He remembered many of those kids fondly. He remembered noticing the quiet ones who liked crafts and games and had a knack for mimicking his drawings. He remembered the clown who'd stand at the front door and sing from a songbook every morning. He remembered the one girl who had assured him that the other children were mostly mean to her because she was ugly and made them want to beat up on girls with good hair. He remembered that kid, years later, who told him that one day people would probably hate her because she was gay. He remembered the one girl who'd paid him 50 cents that day to draw a kitty for her. And he remembered watching from the side those boys who'd been his friends on the way to his first day of middle school, and seeing them all get taller and wider and finally cease to be his friends. He didn't remember a lot of what they'd told him at the school gates that day, but he did remember that much. He understood that most people are strange, and most people are mean, and most people share many things with many other people. This, he had known from the time he was little, and his own life experience since then only confirmed it. He smiled. Back when he was little, he'd been a lot angrier - he'd been viciously cruel, teasing others over no apparent reason, frustrating others with all his apparent calmness and confidence, rejecting and rejecting, shunning and shunning, laughing at all of it and smirking into the distance. His mother would often say that he'd been just like the father she'd left behind - she'd made noise to try and get Mattia to be better, but it was always just as mean. He'd thought he'd got away from that, and yet. "Five more years to pass!" he murmured, pulling out a scrap of paper from his desk drawer. He thought of Andy, who was the only teacher in his class who would appear to actively participate in class. He'd talked to Andy a handful
